

Θέμα: Questionnaire on of industry needs in engineering analysis

EOTEK is inviting all members to participate in the EASIT² project on engineering analysis and simulation. This involves completing an online questionnaire of industry needs in engineering analysis available on this link: <http://www.surveymonkey.com/s/easit2industryneeds>.

All countries in Europe are participating in this survey so it is important for the engineering community in Cyprus to be well represented in this survey.

Those who complete the questionnaire by 21st December 2010 are entitled to a free publication from the international association of engineering analysis NAFEMS.

The questionnaire should take no more than 15 minutes to complete.

EASIT² is a European (non-profit) project preparing a framework for defining and recording analyst skills in all sectors of engineering which could lead to a professional qualification in engineering analysis and simulation. The potential benefits to the engineering industry include improvements in business performance, safety, compliance with customer/legal regulations and staff development/retention. The cross-sector involvement in the project also provides a valuable opportunity for the industry to share ideas. This project is also supported by the Cyprus Construction Technology Platform.
