

Webinar

TAIEX SRSP Workshop on E-Mobility and public charging infrastructure

organised in co-operation with

The European Commission (Directorate General for Structural Reform Support)
and

The Energy Service,
Ministry of Energy, Commerce and Industry

27 January 2021

17h00 to 19h00 (EET)

Transportation is a major contributor to CO₂ emissions in the EU. In Cyprus, nearly 30% of all emissions come from this sector. Electromobility, paired with renewable energy generation, can significantly lower CO₂ emissions. This will not only help to achieve CO₂ emission targets, but will also have a positive effect on citizens' standard of living.

The Webinar, targeted to policy makers and stakeholders in the field of electromobility, will showcase European and International Best Practice examples. Among the issues to be presented are the different regulation modes, the options available to ensure interoperability, roaming between service providers and the information and technology support structures that need to be developed.

Check out the [agenda](#) and register by e-mail to energyservice@meci.gov.cy with the names and emails of designated participants, as soon as possible, and no later than **8 January 2021**. Once registration is completed, participants will receive an email with the details for the connection to the video conference call.

The event is funded by the European Union via the Structural Reform Support Programme and implemented through the Technical Assistance and Information Exchange instrument of the European Commission (TAIEX).
