Title: Energy efficient design – Requirements with guidance for use

Scope: The purpose of this management system standard is to enable organizations establish a

systematic approach to the design, construction and commissioning of new investment projects so as to minimise their energy use and consumption in their operating lifecycles. Such projects may include new, modified and renovated facilities, buildings, equipment,

systems and processes.

The standard has been developed as a project based standard in order to implement a

structured framework into the design process of new projects.

I.S. 399 provides the structure for management of energy efficient design and the processes

and controls necessary for its effective implementation.

The standard can be implemented by any organization involved in the design lifecycle including; owners/investors, engineering design contractors, energy service companies, equipment suppliers and/or independent energy experts. The use of this standard is relevant

to all of these parties however the manner of its application will vary.

While I.S. 399 has been developed mainly from the perspective of the investor organization

where the energy benefits will accrue, the implementation of the standard may be

undertaken by organizations other than the investor.
